

Manage/Monitor Your IT Assets!

ARE YOU PREPARED...

Management is the key part of every organization and when it comes to IT Asset management, it becomes vital. Managing assets like computers / laptops and software in the organization is a very tedious and time consuming job. This requires a very large scale data gathering and reporting system, which leads to more human resource requirement. After all this arrangement it is still difficult to gather all the data and reports in time. Data gathering and report generation mostly take much time than expected. A delayed report leads to late responses which lead to loss of business and time.

IT asset management plays a vital part of every IT enabled organization. It helps stopping unauthorized software/Hardware installation as well as increases security aspects. Unauthorized/pirated/suspicious software can leads to loss of goodwill, market reputation and compromise with security. Loosing data and reputation for any organization is not good by any means.

YOUR PEOPLE DEFINE YOUR COMPANY. HOW CAN YOU MAKE SURE YOU HAVE THE BEST?

ASSET LOGGER CAN HELP...

Asset Logger provides you both Time and IT Asset management in a single solution. It provides all the information of any computer, which is important for management perspective. It monitors uses of applications on the computer and generate reports of computer user activities. It also provides Installed Software and Hardware information of computer and auto updates that information. It helps you to evaluate computer user performance and diagnose potential threats for organization. By monitoring uses of resources it helps you to manage resources more effectively. Asset Logger provides you real-time accurate reports which help you to take decisions on time and monitor your assets.

Manage/Monitor Your IT Assets!

Key FEATURES:

- 1. Hardware Monitoring:** - Asset Logger monitors vital hardware information of the computers. It also keeps track of any hardware changes. It helps inventory and asset managers in managing hardware with very little efforts.
- 2. Software Monitoring:** - Asset Logger monitors software installed on the computers. It keeps track of installed software, whenever any user installs or uninstalls any software it automatically updates the centralized server so that Software and License managers gets most updated information. This also helps in Software License and inventory management.
- 3. Application Uses:** - Asset Logger monitors activities of computer user. It watches all the applications accessed by the computer users and logs them. It keeps track of application name, process name and how much time it is used. This data is stored date wise and administrator can access this data via administrator portal.
- 4. Central Configuration:** - Asset Logger provides centralized configuration system, so that if any administrator wants to change the configuration or policies he/she just has to change it on one place and it gets reflected in whole system. It ensures that each and every computer gets updated configuration / policies.
- 5. Auto Update H/w Information:** - One time hardware information generation is one task and managing that information up-to-date is another task. Asset Logger also handles this task efficiently. It automatically updates any changes of hardware information to the server. So that up-to-date information is always at the tips of administrators.
- 6. Auto Update S/w Information:** - Like hardware information monitoring and updating Asset Logger also keeps track of installed software and changes in software.
- 7. Self Updating:** - Asset Logger has auto update feature, it means whenever any new version of this application is available it will update it automatically, there is no download – uninstall – install steps required, the user only has to do is to his/her while it updating and he/she will be notified after new version is installed. It ensures that every computer has latest version installed on it.
- 8. Administrator Portal:** - Asset Logger provides a powerful portal for administrators. This portal is used for configuration and policy management as well as user management and reporting. Administrators can view activity log of any user. This portal shows hardware and software information with past track of the system.
- 9. Alert Notification:** - Asset Logger has alert notification system which enables administrators to receive hardware/software change information on their emails.
- 10. Versioning:** - Versioning is a feature which is used to keep track of Asset Logger installations. You can create versions of the Asset Logger installations and distribute them; this will enable you to keep track of other useful information for inventories like which version was released with which set of computers and filter information on the basis of that information. By this you can keep records of computers group wise.
